PREFACE

This report is the twelfth revision of the original study entitled Mississippi Personal Income: 1929-1967 which was prepared by Fred M. Wrighton in January, 1970. It was revised in January, 1972 by Larry Turnipseed. The second revision was completed by Robert Glynn Rhyne,Jr., in February, 1973. The third revision was completed in May, 1974, by myself and Mrs. Peggy R. Zimmerman. The fourth, fifth, sixth, seventh, eighth, ninth, and tenth revisions were completed in July, 1976, 1977, 1978, 1979, 1980, 1981 and 1982 by Robert L. Frnka.

Statistics utilized in the present revision, like those in earlier editions, were taken from computer listings of the Bureau of Economic Analysis of the United States Department of Commerce and supplied to the Division of Business Research, Mississippi State University. The computer listings show the distribution of total and per capita personal income for the SMSA's and counties of Mississippi. The total and per capita personal income figures reflect the introduction of commuting data from the 1980 Census-Based Journey-to-Work file.

Former editions have received widespread distribution and have been used by researchers, attorneys, administrators, planners, historians, politicians, and a host of others who needed specific income information about Mississippi.

Comments and suggestions for improvement of its contents and the manner in which they are presented are earnestly solicited. Just address your response to the Editor, Mississippi Personal Income, Post Office Box 5288, Mississippi State, Mississippi 39762.

CHAPTER I

INTRODUCTION

Personal income has long been used as a measure of the economic welfare of the United States and of individuals within the United States. Total personal income has been used to measure economic growth and per capita personal income has been used to measure the economic well being of individuals. Personal income figures, both total and per capita, exist as a long series for the United States and individuals states. Specifically, personal income figures are available, in detail, from 1929 to the present. In addition, personal income figures for the United States are the most prolific of the aggregate income concepts as they are estimated on a monthly basis. While other measures of aggregate income such as national income or gross national product can be applied to the state or regional level for estimating all income originating in those areas, it is felt that personal income can be of extreme importance in the analysis of consumption patterns. The basic difference between personal income and other measures of income is personal income represents only income received by individuals, not property.

Nevertheless, the Bureau of Economic Analysis of the United States Commerce Department recently developed personal income estimates for individual counties. This latest development gave rise to this report with the purpose of presenting the county personal income figures for Mississippi in a clear usable form. Each year the Bureau of Economic Analysis will compile and publish the most current set of local personal income estimates for each state. The estimates for the most current year will incorporate corrections and revisions of the various income components for the earlier years. The changes are reflected in each new publication of this data by the Division of Business Research at this institution.

In the next section, precise definitions of the concepts are given. It is suggested that this material be studied prior to a serious examination of the county tables. This effort is necessary so that the reader will be aware of the uses and limitations that are inherent in personal income measures and their components.

CHAPTER II

DEFINITIONS AND CONCEPTS[1]

Personal Income

Personal Income is income received by persons from all sources, that is, from participation in production, from transfer payments from government and business and from government interest which is treated like a transfer payment. Persons consist of individuals, nonprofit institutions, private non-insured welfare funds and private trust funds. Proprietor's income is treated in its entirety as received by individuals. Personal income then is computed as the sum of 1) Wage and salary disbursements, 2) Other labor income, 3) Proprietor's income, 4) Rental income of persons, 5) Dividends, 6) Personal interest income, 7) Transfer payments less, 8) Personal contributions for social insurance. The above are described in turn.

Wage and Salary Disbursements

Wage and salary disbursements consist of the monetary remuneration of employees, including the compensation of corporate officers; commissions, tips, and bonuses; and receipts in kind that represent income to recipients. It consists of these items only when paid rather than when earned.

Other Labor Income

Other labor income includes employer contributions to private pension and welfare funds and directors fees.

---

[1] The definitions employed here are those given by January 1976 Survey of Current Business, United States Department of Commerce, Bureau of Economic Analysis, Washington, D. C.

Proprietors' Income

Proprietors' income is the monetary income and income in kind of sole proprietorships and partnerships including the independent professions, and of producers' cooperatives. Interest and dividend income received by proprietors, and rental incomes received by persons who are not primarily engaged in the real estate business are excluded. Also included is the inventory valuation adjustment.

Rental Income of Persons

Rental income of persons is the monetary income of persons from the rental of real property, except the income of persons primarily engaged in the real estate business; the imputed net rental income of owner-occupants of nonfarm dwellings; and the royalties received by persons from patents, copyrights, and rights to natural resources.

Dividends

Dividends are all cash dividend disbursements by corporations organized for profit to persons.

Personal Interest Income

Personal interest income is the interest income of persons from all sources, both monetary and imputed. Imputed interest is equal to the value of financial services received by persons without explicit payment plus property income withheld by life insurance companies and mutual financial intermediaries on the account of persons.

Transfer Payments to Persons

Transfer payments to persons are income payments to persons, generally in monetary form, for which they do not render current services. It consists of business transfer payments and government transfer payments. Government transfer payments include payments under the following programs: Federal old-age survivors, disability, and hospital insurance; supplementary medical insurance; state unemployment insurance; railroad retirement and employment insurance; government retirement; workman's compensation; veterans, including veteran's life insurance; food stamp; black lung; supplemental security income and direct relief. Government payments to nonprofit institutions, other than for work under research and development contracts, are also included.

Personal Contributions for Social Insurance

Personal contributions for social insurance includes payments by employees, self-employed, and other individuals who participate in the following programs: federal old age survivors, disability and hospital insurance; supplementary medical insurance; state unemployment insurance; railroad retirement insurance; government retirement; and veterans life insurance.

Residence Adjustment

To measure personal income on a state and county basis criteria for allocating income to these areas must be established. In the case of wages and salaries, other labor and proprietors'income less personal contributions for social insurance, the relevant criteria seems to be place of work of income recipients and place of residence. The difference between the two is the net flow of commuter earning across state and county lines. For rental income, dividends, personal interest and transfer payments the distinction between place of work and residence cannot be applied. Therefore, area earnings on a place-of-work basis minus the earnings of persons who work in the given area but reside in another area, plus the earnings of persons who reside in the given area but work in another area, will result in area earnings on a residence basis.

Per Capita Income

Per capita is the total personal income within a geographical area divided by the number of residents in that area.

A description of the methodology used for state and county estimates of personal income is available upon request by the Division of Business Research, Mississippi State University.

CHAPTER III

TRENDS IN PERSONAL INCOME IN MISSISSIPPI

Mississippi has experienced, as have all states, general growth in both personal income and per capita income over the years from 1963 to 1982. In recent years much of the rise for both Mississippi and the United States has been due to inflation, as the figures used throughout this report are current dollar figures.

Table I shows the various amounts of personal income for Mississippi and the United States for the last 20 years. In addition, annual rates of increase are shown for both the State and Nation. Over the full 20-year period, personal income for Mississippi has increased 496 percent while the increase was 453 percent for the United States. Since 1977 the rate of increase was 63 percent for Mississippi and 68 percent for the United States. Thus, recent trends show Mississippi to be growing slightly slower than the Nation as a whole, if personal income is taken as a guide.

A better indication of growth comparisons can be made by observing Table II. In this table are shown the amounts of per capita personal income for Mississippi, the Southeast and the United States for the past 20 years. Also shown, are the annual rates of increase for each year. Again it must be noted that the rate of increase in per capita personal income for Mississippi over the 20-year period was 425 percent. The amounts for the Southeast and United States respectively, were 415 and 349 percent. For the last five years the figure for Mississippi was 57 percent, while the Southeast and United States respectively were 61 and 59 percent.

Source: Survey of Current Business, U.S. Department of Commerce, Bureau of Economic Analysis, Washington, D.C., August, 1982.

While rates of increase in per capita personal income have looked favorable in recent years, Mississippi still remains lowest for all states. Two remaining columns in Table II depict the State's improvement in per capita personal income. Column six shows the Mississippi per capita personal income as a percentage of the United States per capita personal income. The figure has gradually increased over the past 20 years from 59.9 percent in 1963 to 70.0 percent in 1982 with a high point of 71.1 percent in 1978. The same is illustrated in column nine except with regard to the Southeast. Again the percentage figure has drifted upward gradually from 79.5 percent in 1963 to 81.0 percent in 1982 with a high of 83.3 percent in 1977. Chart I is merely a graph of these two columns in Table II. From the graph it appears that while the overall trend for both lines has been upward, it seems to have declined slightly in recent years.

It should be noted that per capita personal income can change by either a population change, and income change, or a combination of the two. A summary of population trends show that the rate of increase in population for Mississippi over the past 20 years was 13.5 percent as compared to 23.1 percent for the Nation. For the last five years Mississippi is still increasing at a lesser rate than the United States in population. The rates are 3.7 and 5.4 respectively for Mississippi and the United States. The trends in per capita personal income appeared to be somewhat different. It may be inferred that a significant portion of the increase in per capita personal income in Mississippi up to the last five years was due to the fact that the population of the State had not increased nearly as rapidly as the Nation's population. For the last five years, lower rates of population growth have been consistent with lower per capita personal income growth in Mississippi.

Table III gives an indication of the changing income mix of the State. It is interesting to note the continuing decline of the agricultural sector. In 1929 this accounted for 44 percent of total earnings, but has since declined to about four percent for 1981. The largest gainer in absolute terms has been private nonfarm earnings, while Federal Government, and State and Local Government earnings have had the biggest percentage rises over that period.

CHAPTER IV

MISSISSIPPI COUNTY PERSONAL INCOME

The most recent estimates for county personal income as provided by the Bureau of Economic Analysis is for 1981. In addition, detailed breakdowns are also given for standard metropolitan statistical areas.

Table IV shows total personal income for all counties and all SMSA's in Mississippi from 1976-1981 and the percentage change over that period. Figure I shows those counties where the percentage growth over this period was equal to or greater than the overall state growth rate. Table V is the same table except it shows per capita personal income. Table VI has taken the 1981 values of per capita income for all counties and arranged them in decending order. In addition, the percentages in relation to State and National averages are shown. Figure II shows those counties which were above the state average per capita personal income in 1981. Table VII shows population figures for all counties and SMSA's in Mississippi for the 1976-1981 period. Figure III is a summary distribution of population size by county for 1981.

The major and final portion of this report consists of a detailed county and SMSA report of personal income for the 1976-1981 period. Page references for these tables are given on page 32.
